Chapter 1- PRECAUTIONS & SAFETY NOTICES

1. SAFETY PRECAUTIONS

This monitor is manufactured and tested on a ground principle that a user's safety comes first. However, improper used or installation may cause damage to the monitor as well as to the user.

WARNINGS:

- This monitor should be operated only at the correct power sources indicated on the label on the rear of the monitor. If you're unsure of the power supply in you residence, consult your local dealer or Power Company.
- Do not try to repair the monitor by yourself, as it contains no user-serviceable parts. This monitor should only be repaired by a qualified technician.
- Do not remove the monitor cabinet. There are high-voltage parts inside that may cause electric shock to human bodies.
- Stop using the monitor if the cabinet is damaged. Have it checked by a service technician.
- Put your monitor only in a lean, cool, dry environment. If it gets wet, unplug the power cable immediately and consult your closed dealer.
- Always unplug the monitor before cleaning it. Clean the cabinet with a clean, dry cloth. Apply non-ammonia based cleaner onto the cloth, not directly onto the class screen.
- Do not place heavy objects on the monitor or power cord.

2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety visual inspections and the protection afforded by them cannot necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Before replacing any of these components read the parts list in this manual carefully. The use of substitute replacement parts, which do not have the same safety characteristics as specified in the parts list, may create shock, fire, or other hazards.

3. SERVICE NOTES

- When replacing parts or circuit boards, clamp the lead wires around terminals before soldering.
- Keep wires away from high voltage, high temperature components and sharp edges.
- Keep wires in their original position so as to reduce interference.
- Adjustment of this product please refers to the user' manual.

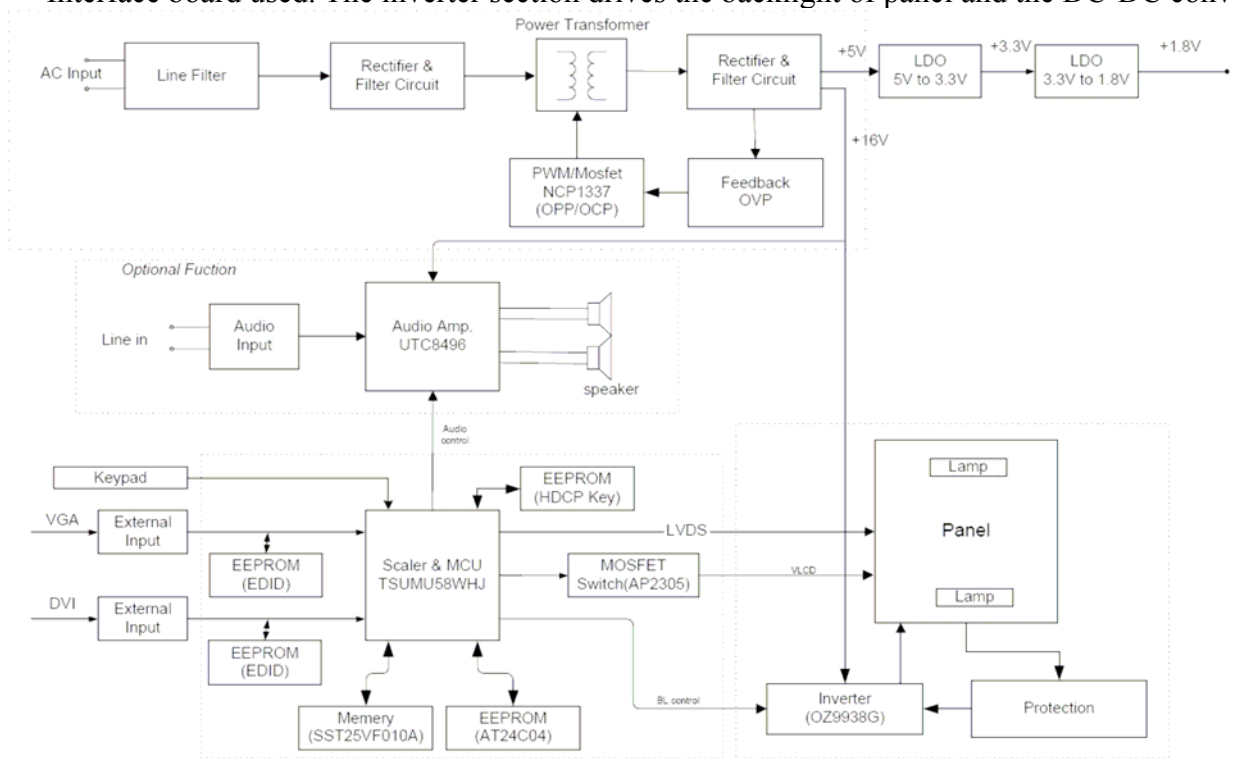

Chapter 2- SERVICE TOOLS & EQUIPMENT REQUIRED

1. SIGNAL GENERATOR
2. MULTIMETER
3. SCREW DRIVER
4. OSCILLOSCOPE
5. Soldering IRON
6. SOLDER
7. VGA Cable (15pins point to point)
8. Color Analyzer
9. Myson412 ISP Board
10. EDID Board
11. EDID program file

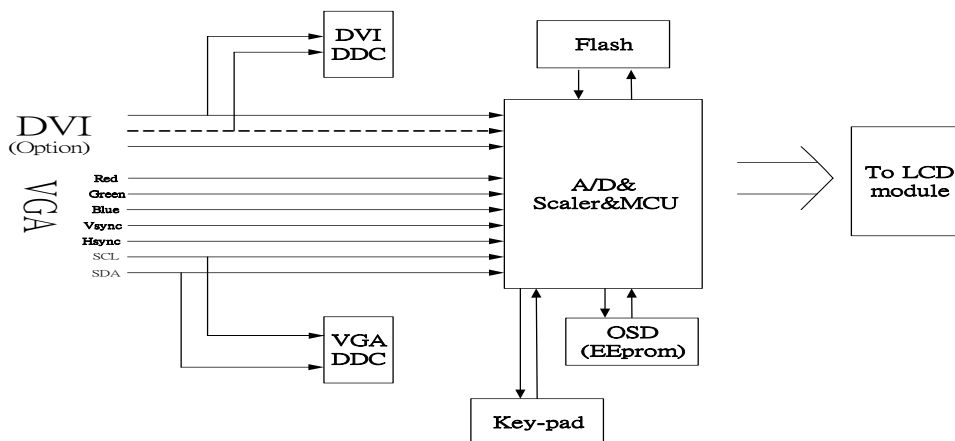

Chapter 3- CIRCUIT THEORY

1. Monitor Block Diagram

The LCD Monitor contains an interface board, and inverter/power/Audio board, keypad board and flat panel. In Inverter/power/Audio board, power section supplies +14V & +5V for Inverter/Audio and Interface board used. The inverter section drives the backlight of panel and the DC-DC conversion.

2. Interface BOARD DIAGRAM

3. Electronic Circuit Theory

1.1 Switching Mode Power Supply

1.1.1 AC Current Input Circuit

P801 is a connector for connecting AC Power. F801 is a fuse to protect all the circuit. AC input voltage is from 90v to 264V. R801 and R802 joined between two inputting main circuit to prevent man from shock. L801 is used to clear up low frequency wave. C801 and C802 are used to discharge the waves that L801 produced. High frequency waves are damped by C801 and C802. D801 is a rectifier which composed of 4 build-in diodes, it inverts AC to DC.

1.1.2 High Voltage to Low Voltage Control Circuit

C804 is used to smooth the wave from rectifier. IC802 is a highly integrated PWM controller. When rectified DC high voltage is applied to the HV pin during start-up, the MOSFET Q804 is

initially off, and the Vcc pin capacitor is charged. When the Vcc pin voltage reaches approximately 14V, the control circuitry is activated and the soft-start begins. The soft-start circuit gradually increases the duty cycle of the MOSFET from zero to the maximum value over approximately 4ms. If no external feedback/supply current is fed into the FB pin by the end of the soft-start, the current Setpoint will be above the fault level, FAULT flag is raised, if the FAULT duration exceeds 80ms, the output controller disable resistor R808, R809, R810, R811 are for line over voltage shutdown(OVP)

When PWM is turned off, the main current flow will be consumed through R804 and D802, This will prevent MOSFET Q804 from being damaged under large current impulse and voltage spike.

D803 and C807 to provide internal Auxiliary voltage to Vcc pin during normal operation. Otherwise, error amplifier and feedback current input the FB pin for duty cycle control.

1.1.3 DC 5V and DC 16V Output Circuit

For DC 5V, D805 is used to rectify the inducted current. R828 and C814 are used to store energy when current is reversed. The parts including C818, C822, C820,L803 are used to smooth the current waves.

For DC 16V, D803 is used to rectify the inducted current. R827 and C813 are used to store energy when current is reversed. The parts including C815, C817 and L802 are used to smooth the current waves.

1.1.4 Feedback and OVP Protect Circuit

Pin R of IC803 is supplied 2.5-v stable voltage. It connects to 5V and 16V output through R822, R823 and R824. R822, R823 and R824 are output sampling resistor. When the sampling voltage more than 2.5V or less than 2.5V, current of FB IC802 will change, this can change the voltage from T801.

OVP Protect Circuit: When output is overvoltage, the auxiliary winding voltage will be increased, when it reaches about 14V. Q803 is triggered . It makes the IC802 Pin 1 exceed 5V, then the IC802 output will be disabled.

Q801, R816, R817 and ZD803 make up of dummy loading circuit. For start-up sequence, during 5V output take place high loading first, this dummy loading circuit operated to insure 16V not be increased.

1.2 Interface Board Circuit

1.2.1 RGB CAPTURE

- Signal RED, GREEN, BLUE input through CN103 #1, #2, #3, via R105, FB101, R101, R106, FB102, R102, R107, FB103, R103, Stop DC via C101, C102 and C103, and then enter into U104 (TSUM56AWHK) analog input terminal #59, #56, #54, and then TSUM56AWHK deals with signal internally. D101, D102, D103 are ESD protector to prevent U104 from ESD.
- Signal DDC_SCL (series clock) inputs via CN103#15, and then passes through ZD104 Zener for ESD protection, via R121, goes into EDID EEPROM IC U102 #6.
- Signal DDC_SDA (series data) inputs via CN102 #12, and then passes through ZD105 Zener for ESD protection, via R122, goes into EDID EEPROM IC U102 #5.
- Signal TTL vertical sync. (Vsync) inputs via CN103 #14, and then clamped by D103 Zener, passes through R116, and then goes into IC U104 #64.
- Signal TTL horizontal sync. (Hsync) inputs via CN103 #13, and then clamped by D102 Zener, passes through FB104, R115, and then goes into IC U104 #63.
- CN103#5 is defined as cable detect pin, this detector realize passes through R113, go into U104#26, and ZD109 is ESD protector.
- U102 +5V is supplied by PC via CN103#9 with ZD101 for ESD protection, or supplied by Monitor self via D104.
- U102 is an EEPROM IC which is memory and EDID data saved in it.

1.2.2 DVI CAPTURE

- Differential Signal input RX0+,RX0-,RX1+,RX1-,RX2+,RX2-,RXC+,RXC- through CN102 #18,#17,#10,#9,#2,#1,#23,#24 via R130, R131, R132, R133, R134, R135, R137, R138 enter into U104 Digital input terminal #45,#46,#42,#43,#39,#40,#48,#49, and then TSUM56AWHK deals with signal internally.
- Signal DDC_SCL (series clock) inputs via CN102#6, and then passes through ZD106 Zener for ESD protection, via R126, goes into EDID EEPROM IC U101 #6.
- Signal DDC_SDA (series data) inputs via CN102 #7, and then passes through ZD107 Zener for ESD protection, via R127, goes into EDID EEPROM IC U101 #5.
- CN102 #16 is defined as cable detect pin, this detector realize passes through R125 ,go into U104#27, and D106 is ESD protector.
- U101 +5V is supplied by PC via CN102#14 with ZD108 for ESD protection, or supplied by Monitor self via D107.
- U102 is an EEPROM IC which is memory and EDID data saved in it.

1.2.3 Buttons Control

- Button “Power” on front of bezel connects to scaler TSUMU58WHJ pin #4 through R159, via CN102#8.
- Button “MENU” on front of bezel connects to scaler TSUMU58WHJ pin #119 through R153, via CN102#1; Button “>” (Right) on front bezel connects to scaler TSUMU58WHJ pin #120 through R154, via CN102#2; Button “<” (Left) on front bezel connects to scaler TSUMU58WHJ pin #121 through R155, via CN102#3; Button “AUTO” on front bezel connects to scaler TSUMU58WHJ pin #122 through R156, via CN102#4;
- U107 is an EEPROM IC which memory OSD setting and save the value adjusted by user.
- LED Indicator

When monitor normally working, scaler TSUMU58WHJ pin #124 sends out a low potential, via R107, switch on Q105, then flows to CN102 #7, LED Green ON.

When in “Suspend” mode, scaler TSUMU58WHJ pin #123 sends out a low potential, via R102, switch on Q102, then flows to CN102 #5, LED Amber ON.

1.2.4 Scaling IC (U104 tsum56AWHK)

- U104 #105~#114 output 8 bit even LVDS digital data to panel control circuit through CN106.
- U104 #118~#127 output 8 bit odd LVDS digital data to panel control circuit through CN106.
- U104 #75 output ”H” potential to make Q106 conducted, and then make Q103 conducted, +5V flow to CN106#1~#3 as Panel Vdd .
- U104 #20 output,”L” ”H” potential to control Inverter on/off.
- U104 #21 outputs Brightness “PWM” signals to control CCFL brightness.
- TCLK by Crystal 14.318MHz input to U104 #32.

Please refer to tsum56AWHK Pin Assignments table in page

1.2.5 Regulator Circuit

- +5V is from powerboard CN103 #1 and CN102
- +3.3V generates from +5V through D116 and C168 filtering and U103 which is output +3.3V LDO
- +1.8V generates from +3.3V through C143 filtering and U108 which is output +1.8V LDO, for U104 used.

1.3 Inverter circuit

Power supply 5V then pass through R517 to IC501. The extra PWM pulse signal (BRIGHTNESS signal) input to control IC through R512, R514, C510, The LCT pin is set to a DC voltage of 0.7V by using a resistor divider(R507, R516), change the duty of PWM pulse, will regulate the lamp current. The ON/OFF voltage connect to pin10 of IC501 through D501, R501,

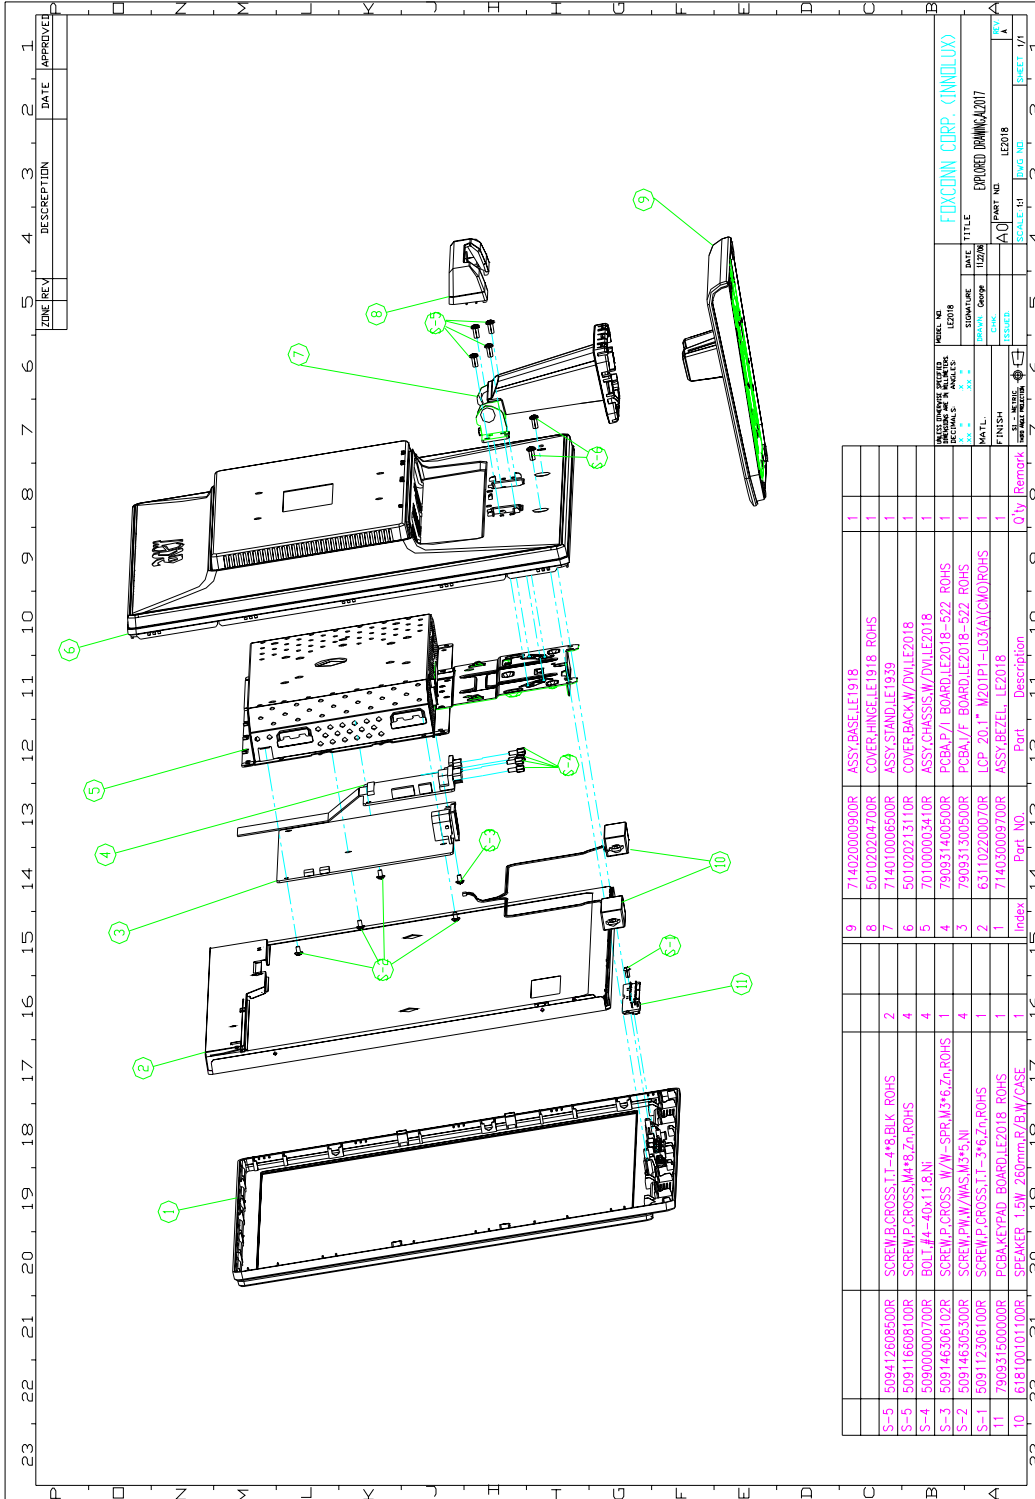

A voltage of 2V to pin10 of IC501 enables the IC and activates the striking timer. The SSTCMP pin of IC501 performs the soft function, the C511 set the time of SST. The operation frequency determined by external capacitor C512, C521 and resistor R508 connected at CT pin of IC501. C515 connect the TIMER pin of IC501, the capacitor to set striking time and shunt down delay time. DRV1, DRV2 output for power MOSFET U501, U502.

OZ9938 provides two drive signals for U501, U502, and they work in push pull topology driving, two transformers are connected in parallel with each transformer driving two lamps in series. Turning each N-Channel MOSFET “on/off” complementarily, produces an alternating current through the transformer primary and secondary. The “on” duration of the switches determines the amount of energy delivered to the CCFLs. R504, C504, R505, C505, R532, C529, R530, C522 are snubber networks, they suppress Voltage transient spike in drain of power MOSFET.

R506, R510, C509, C513, C514, R525, R531, C528, C525, and C527 are connected between high voltage output connector and ground, the divided AC voltage is inverted DC voltage through D502, D503, D508, and D509. The sense voltage feed back to VSEN (pin 6 of IC501) for an over voltage/over current condition during normal operation. R528, R533, R523, R536 are current sense resistor, current sense signal feed back to Isense (pin 5 of IC501) for lamp “ON” detection.

Chapter 4- Disassembly & Assembly

1. Exploded Diagram Exploded drawing(With DVI)

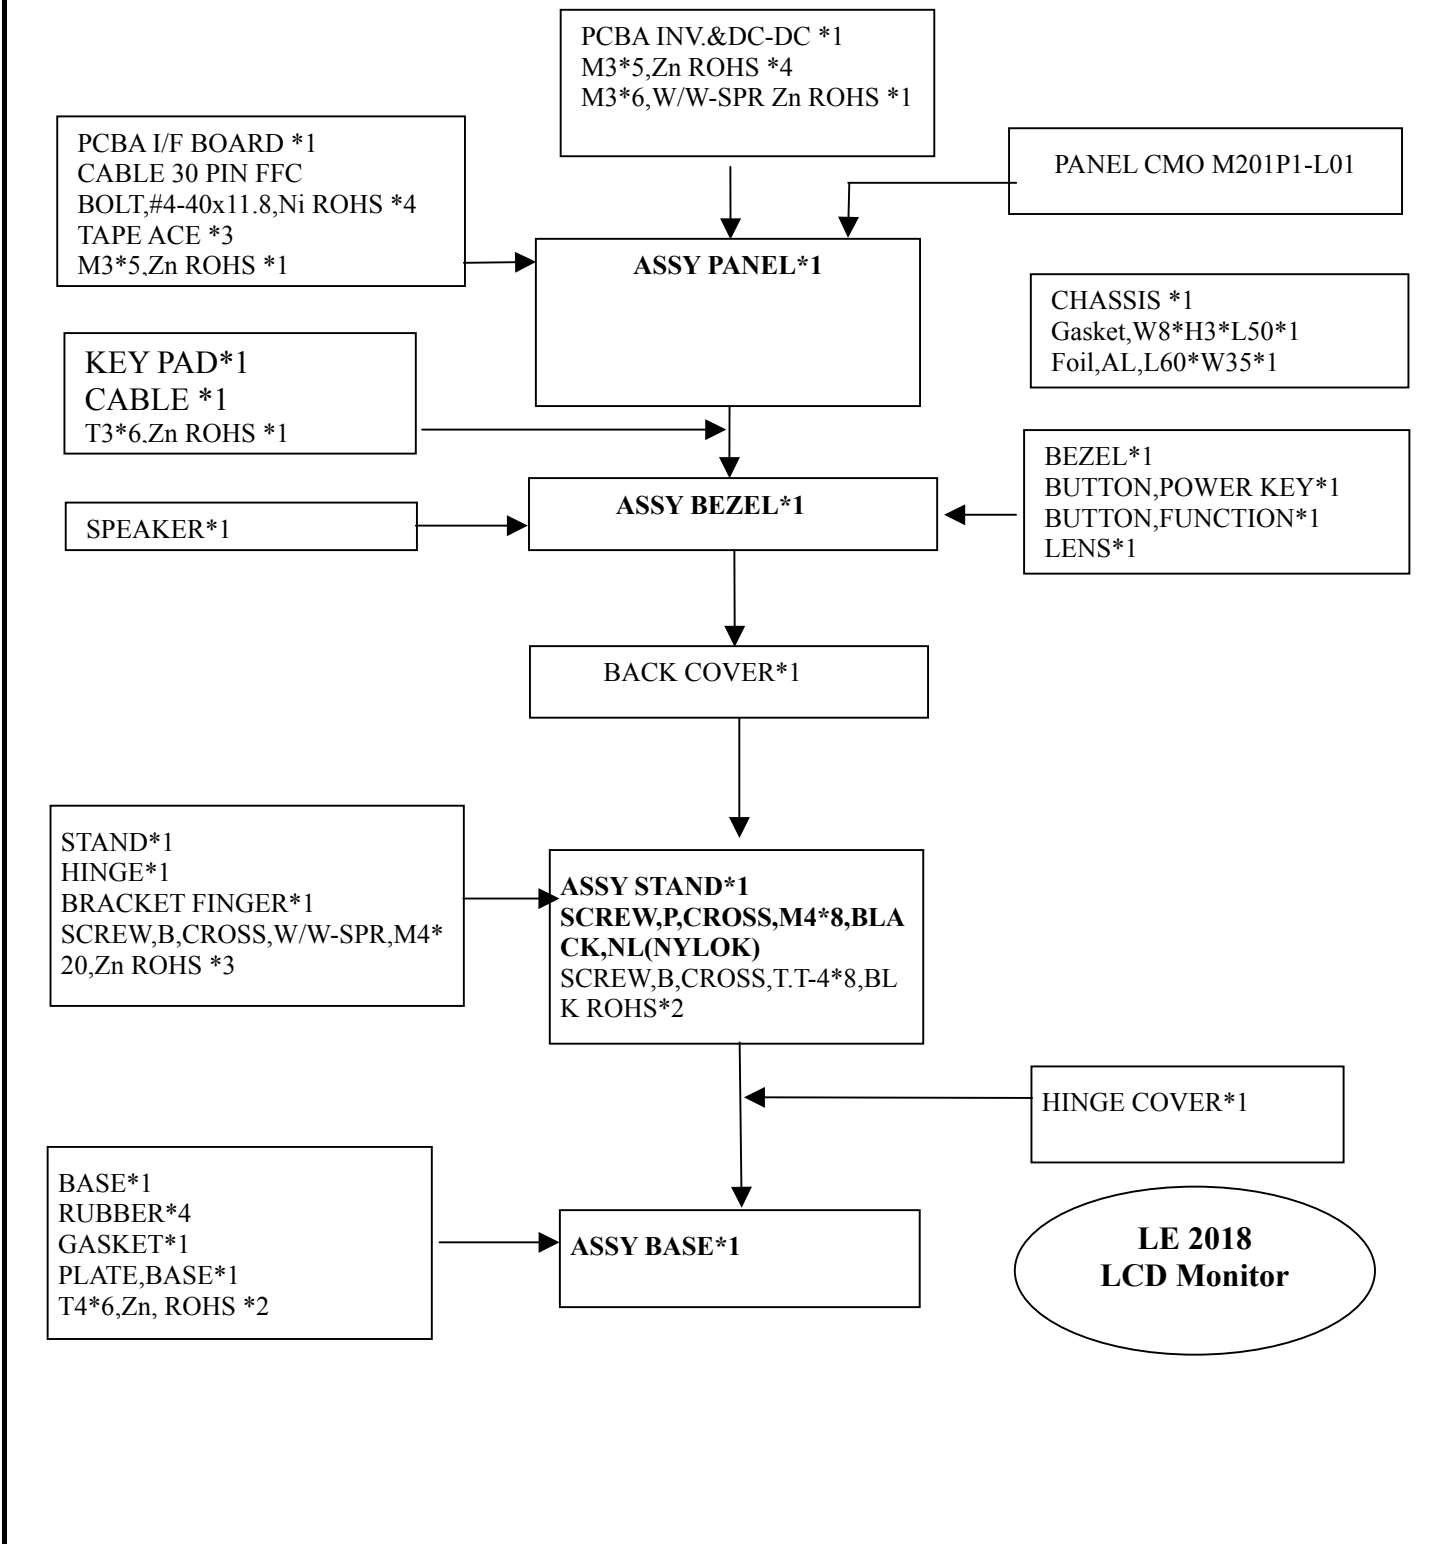

Exploded drawing(W/O DVI)

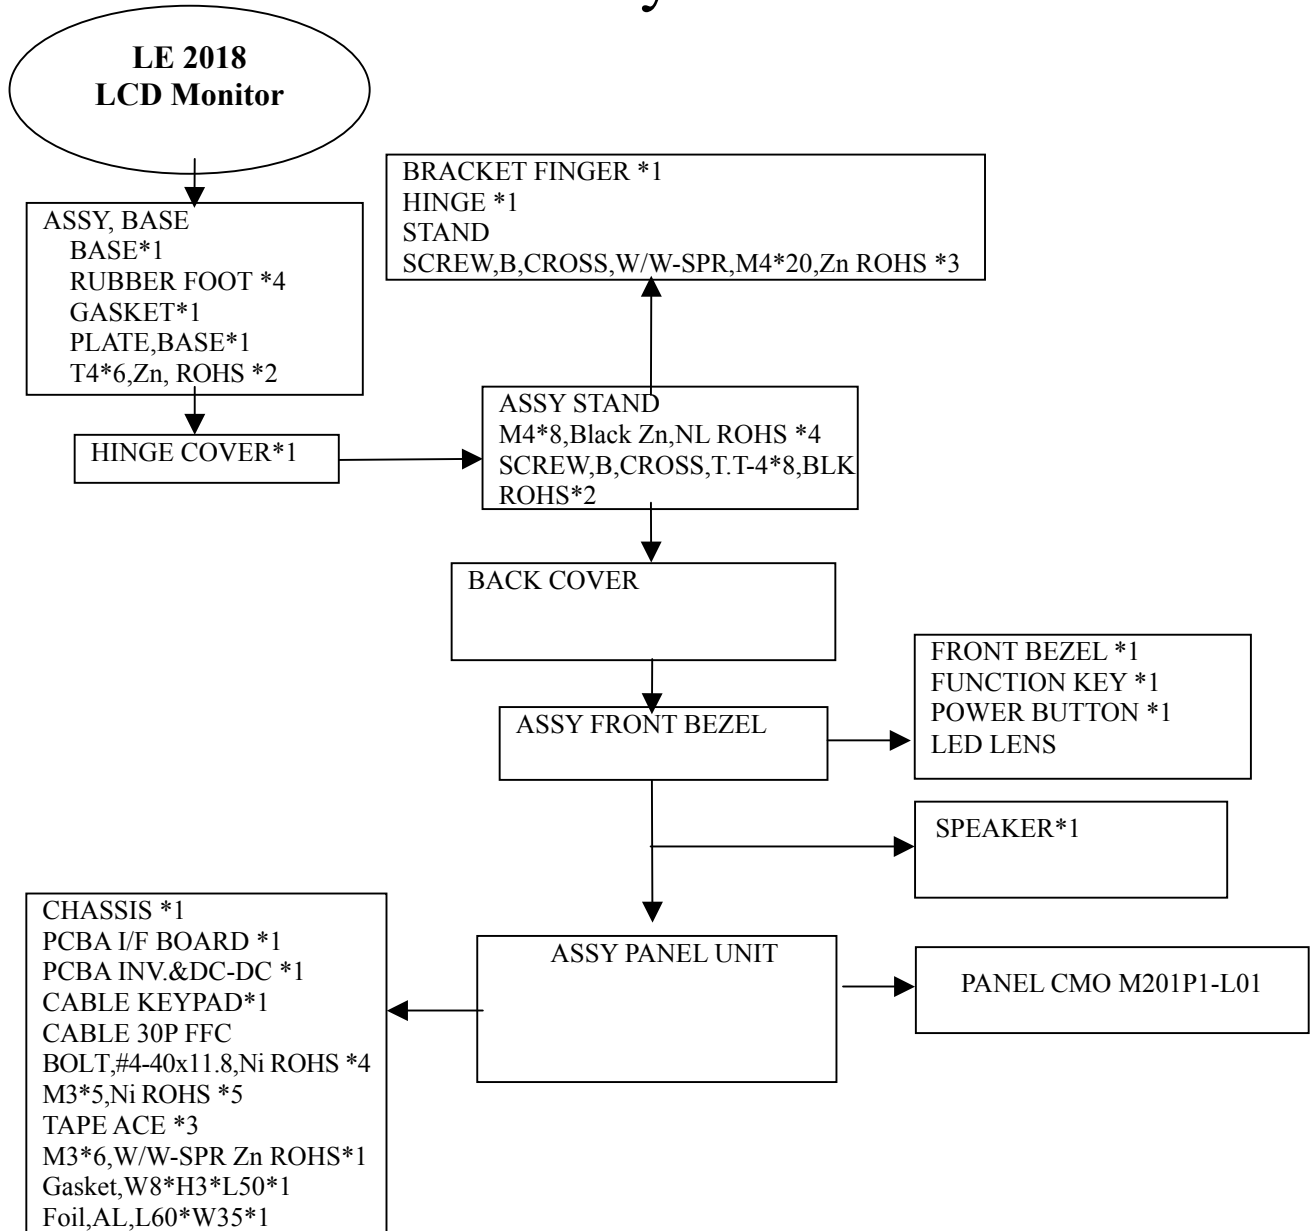

(We will update later)

The DIS assembly direction please following direction of arrowhead

Process To Access Factory Mode

Chapter 5- TEST AND ADJUSTMENT

1. GENERAL POINTS

1.1 Test Equipment or Tool

- 1.1.1 Test pattern generator: PC or video pattern generator (Chroma-2326/2160/2130)
- 1.1.2 Color analyzer: Chroma-7120
- 1.1.3 Power meter: AC Source Chroma-6408
- 1.1.4 Electrical safety tester: Chroma (Zentech) 9032A
- 1.1.5 Stereo source: Music or signal generator input
- 1.1.6 Auto shock fixture
- 1.1.7 Temperature and humidity sensor
- 1.1.8 DDC interface card and EDID file

1.2 Preset Test Pattern

- 1.2.1 Crosshatch (General-1)
- 1.2.2 Gray Bar (16 & 32 levels)
- 1.2.3 Full White
- 1.2.4 Aging (Burn-in) Pattern: Full Red, Green, Blue, White, and Black

1.3 AC input

All measurements mentioned hereafter are carried out at a normal mains voltage (90 - 264 V_{AC} for the model with full range power supply, unless otherwise stated)

1.4 Observation Distance

- 1.4.1 Observation distance from eyes to panel is defined as 50cm
- 1.4.2 Visual distance from instrument to panel is defined as 20cm

1.5 Key Function Description

1.5.1 Control buttons on the front bezel

CONTROL KEY	KEYS FUNCTION
[AUTO]	A. When OSD un-displays, press [AUTO] to perform auto-adjustment B. When OSD displays, press [AUTO] to return to previous level menu
[MENU]	A. When OSD isn't shown on screen, press [MENU] to enter OSD interface B. When OSD displays, press [MENU] to perform function of menu icon that is highlight or enter next level menu
[▶], [◀]	A. When "MENU OSD" displays, press these keys to change the contents of an adjustment item, or change an adjustment value B. When "MENU OSD" un-displays, press [▶], adjust volume high; press [◀] adjust volume low
[POWER]	Power on or power off the monitor

1.5.2 Hot Key Operation

FUNCTION	HOT KEY OPERATION					DESCRIPTION
	AUTO	◀	▶	MENU	POWER	
FACTORY MODE	•			•	ON	Press [AUTO] & [MENU] at the same time, and then press [POWER] for DC power on. OSD menu will be shown with "F" on the left top. Select "F" for entering factory mode.

1.6 Burn-in (Aging) Pattern

- 1.6.1 Burn-in patterns are: full Red, Green, Blue, White and Blac
- 1.6.2 Stop burn-in pattern by providing with video signal from D-sub connector
- 1.6.3 Enter or exit burn-in mode by setting “burn-in” to be “on” or “off” in the factory mode

1.7 Warm Up

All test units have to be done warm up after at least 2 hours in a room with temperature of $40\pm 5^{\circ}\text{C}$.
(Except particular requirement)

2. INPUT SIGNAL

2.1 Video Signal Input

2.1.1 VESA Analog

The video input consists of red, green, and blue signals. The video signals are analog levels, where 0V corresponds to black and 700mV is the maximum signal amplitude. Input impedance of video pins is $75\ \text{ohm} \pm 1\%$.

Sync signal input

The capability of sync signal inputs shall include separate sync. Input impedance: 2k2 ohms the signals are defined as follow:

Separate sync TTL level, Positive/Negative

2.1.2 Input signal mode

PRESET TEST MODE TIMING

Resolution	H-Freq. (kHz)	V-Freq. (Hz)	Dot Clock (MHz)	Mode
640 x 480	31.5	60.0	25.175	VESA Standard
	37.9	72.0	31.500	
	37.5	75.0	31.500	
800 x 600	35.1	56.0	36.000	
	37.9	60.0	40.000	
	48.1	72.0	50.000	
	46.9	75.0	49.500	
1024 x 768	48.4	60.0	65.000	
	56.5	70.0	75.000	
	60.0	75.0	78.750	
1152 x 864	67.5	75.0	108.000	
1280 x 960	60.0	60.0	108.000	
1280 x 1024	64.0	60.0	108.000	
	80.0	75.0	135.000	
1400 x 1050	65.371	59.978	121.75	
	82.28	74.87	156.0	
640 x 480	35.0	66.7	30.200	Power Macintosh series
832 x 624	49.7	74.6	57.300	
1152 x 870	68.7	75.0	100.000	

2.1.3 VGA signal cable

15 pin D-sub VGA connector of signal cable.

2.1.4 Interface

Analog signal: The input signals are applied to display through D-sub cable.

Length: 1.8 m +/- 50 mm (fixed)
 Connector type: D-sub male.
 With DDC_2B pin assignments.
 Blue connector thumb-operated jack screws

Pin Assignment:

PIN No.	SIGNAL	PIN No.	SIGNAL
1	Red video input	9	VGA +5V
2	Green video input	10	GND
3	Blue video input	11	GND
4	GND	12	Serial data line (SDA)
5	Cable detect	13	H. Sync / H+V
6	Red video GND	14	V. Sync
7	Green video GND	15	Data clock line (SCL)
8	Blue video GND		

3. FUNCTION CHECK

3.1 OSD Function Test

3.1.1 Test mode: 1400x1050@ 60 Hz

3.1.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.1.3 Check single key function and hot key function about key “Power”, “Menu”, “▶”, “◀”, “Exit/Auto”, it should operate normally

3.2 Screen Picture Check

3.2.1 Test mode: 1400x1050 @ 60 Hz

3.2.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.2.3 Select OSD menu to execute ‘Auto’ function, screen picture shouldn’t appear abnormal phenomenon and picture on screen should fit in with active display screen.

3.3 Auto Color Balance

3.3.1 Test mode: 1400x1050 @ 60 Hz

3.3.2 Test pattern: pattern #42 of 5-MOSAIC

3.3.3 Enter "Factory Mode" pressing "Auto color" key, and execute "AUTO".

3.4 Timing Check

3.4.1 Test mode: Refer to preset timing table and power saving mode

3.4.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.4.3 After change above timing and execute “Auto” function automatically, picture should fit in with active display screen.

3.4.4 Under power saving mode, LED lamp on the key board should be orange

3.5 Power Consumption Function Test

3.5.1 Test mode: 1400x1050 @ 60 Hz

3.5.2 Test pattern: pattern #41 of “WHITE”

3.5.3 Adjusting both brightness value to maximum,

3.5.4 Measure power consumption as the following

Status	Power Consumption	LED Display
Normal	< 42W(with audio)	Green
Standby (No H/V sync)	< 1W	Orange
Power off	< 1W	No display

3.6 VGA Cable Detect Test

If VGA cable of LCD monitor isn't connected to video pattern generator or PC, "NO SIGNAL" should be shown on screen.

3.7 Hi-Pot test

Test condition:

- high voltage 2.3KV(DC)
- leakage current 10mA
- rising time 1 sec.
- test time 3 sec.

3.8 Grounding Test

Test condition:

- test current 30A / 2 sec
- impedance < 0.1Ω

3.9 Bumping Test

3.9.1 Test mode: 1400x1050 @ 60 Hz;

3.9.2 Test pattern: pattern #1 of crosshatch (GENERAL-1)

3.9.3 To shock LCD monitor lightly at the center of rear cover and edges with 1~2kg/cm² force for three times, no abnormal phenomenon is found on panel screen.

4. DISPLAY CHECK

4.1 Panel Flicker Check

Connect LCD monitor to PC, set LCD monitor to be timing of 14400x1050@60 Hz, adjust brightness to be default value (brightness at maximum), execute "Auto" function, and then check picture of shut down under windows 98 operating system, or flicker-pattern of pixel on-off. It should be that no flicker be found on panel screen.

4.2 Panel Defect Inspection

4.2.1 Test mode: 1400 x 1050@60Hz

4.2.2 Test pattern: Crosshatch/Full white/Red/Green/Blue/Black/16 color bar/64 gray bars

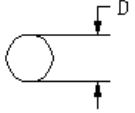

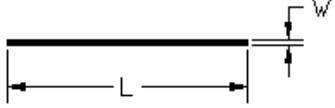

4.2.3 Display quality must be (according to DIN 13406-2 pixel fault class II)

Defect Type	Specification	Major	Minor
Bright dot defect	THD		•
Dark dot defect	THD		•
Total bright and dark dots	THD		•
Bright Dots – 2 Adjacent B	THD		•
Bright Dots – 3 or more Adjacent	THD		•
Black Dots – 2 Adjacent B	THD		•
Black Dots – 3 or more Adjacent	THD		•
Distance between defect dots	THD		•
Distance between Dark dots	THD		•

Note 1: Dot defect is defined as the defective area is not larger than 50% of the dot area. Bright Dot is

defined 5% transmission ND filter.

Note 2: Light Leakage: There shall not be visible light around the customer's bezel after assembly in normal View angle.

Defect Type		Specification Size	Count (N)	Major	Minor
Dot Shape(Particle、Scratch and Bubbles in Display area or on The Polarizer)		Black spots which appear when B/L operating			
		$0.15\text{mm} \leq D \leq 0.5 \text{ mm}$	$N \leq 3$		•
Line Shape (Particles、Scratch、Fiber and Bubbles in display area or on The Polarizer)		$L \leq 0.5\text{mm}$ and $W \leq 0.05 \text{ mm}$	Ignored		
		$0.5\text{mm} < L \leq 5\text{mm}$ and $0.05\text{mm} < W \leq 0.1\text{mm}$	$N \leq 4$		•
		$L > 5\text{mm}$ or $W > 0.1\text{mm}$	$N = 0$		
Display non-uniformity		There should be non-uniformity through 5% transparency of filter or judge by limit sample if necessary.			•
Bezel	Scratch	No harm			•
	Dirt				•
	Wrap				•
	Sunken				•
Label	No label	No			•
	Invert label				•
	Broken				•
	Dirt	Word can be read.			•
	Not clear				•
	Word out of				•
	Mistake	No			•
	Position	Be attached on right position			•
Screw	Not enough	No			•
	Limp	No			•
Connecto	Connection	No bend on pins and damage			•
FPC/FFC	Broken	No			•

5. PICTURE CHECK

5.1 Check brightness uniformity

5.1.1 Test mode: 1400x1050 @ 60 Hz

5.1.2 Test pattern: pattern #41 of "WHITE"

5.1.3 Test tool: Color Analyzer Chroma7120

5.1.4 Set brightness and contrast to be maximum, apply pattern as Fig.3, it should be the following requirement:

Min. luminance of nine points (backlight) $\geq 75\%$
 Max. luminance of nine points (backlight) $\geq 75\%$

Fig. 3

5.2 Color Temperature Check

5.2.1 Test mode: 1400x1050 @ 60 Hz

5.2.2 Test pattern: pattern #41 of “WHITE”

5.2.3 Test tool: Color Analyzer Chroma7120

5.2.4 Set brightness to be maximum and contrast to be 50%, measure color coordinate and luminance by color analyzer as the following:

Mode	Chromaticity Coordinate	
	x	y
9300K	0.283 ± 0.030	0.298 ± 0.030
USER	/	/
6500K	0.313 ± 0.030	0.329 ± 0.030

5.3 Brightness Out (Video signal input 700mV ± 2%)

5.3.1 Test mode: 1400x1050 @ 60 Hz

5.3.2 Test pattern: pattern #41 of “WHITE”

5.3.3 Test tool: Color Analyzer Chroma7120

Set brightness and contrast to be maximum with white pattern, to measure the screen center, the light output shall be $\geq BL \text{ cd/m}^2$

Mode	BL (cd/cm ²)	Remark
CMO M201P1-L03	220	

5.4 DDC Data Check

5.4.1 EDID program

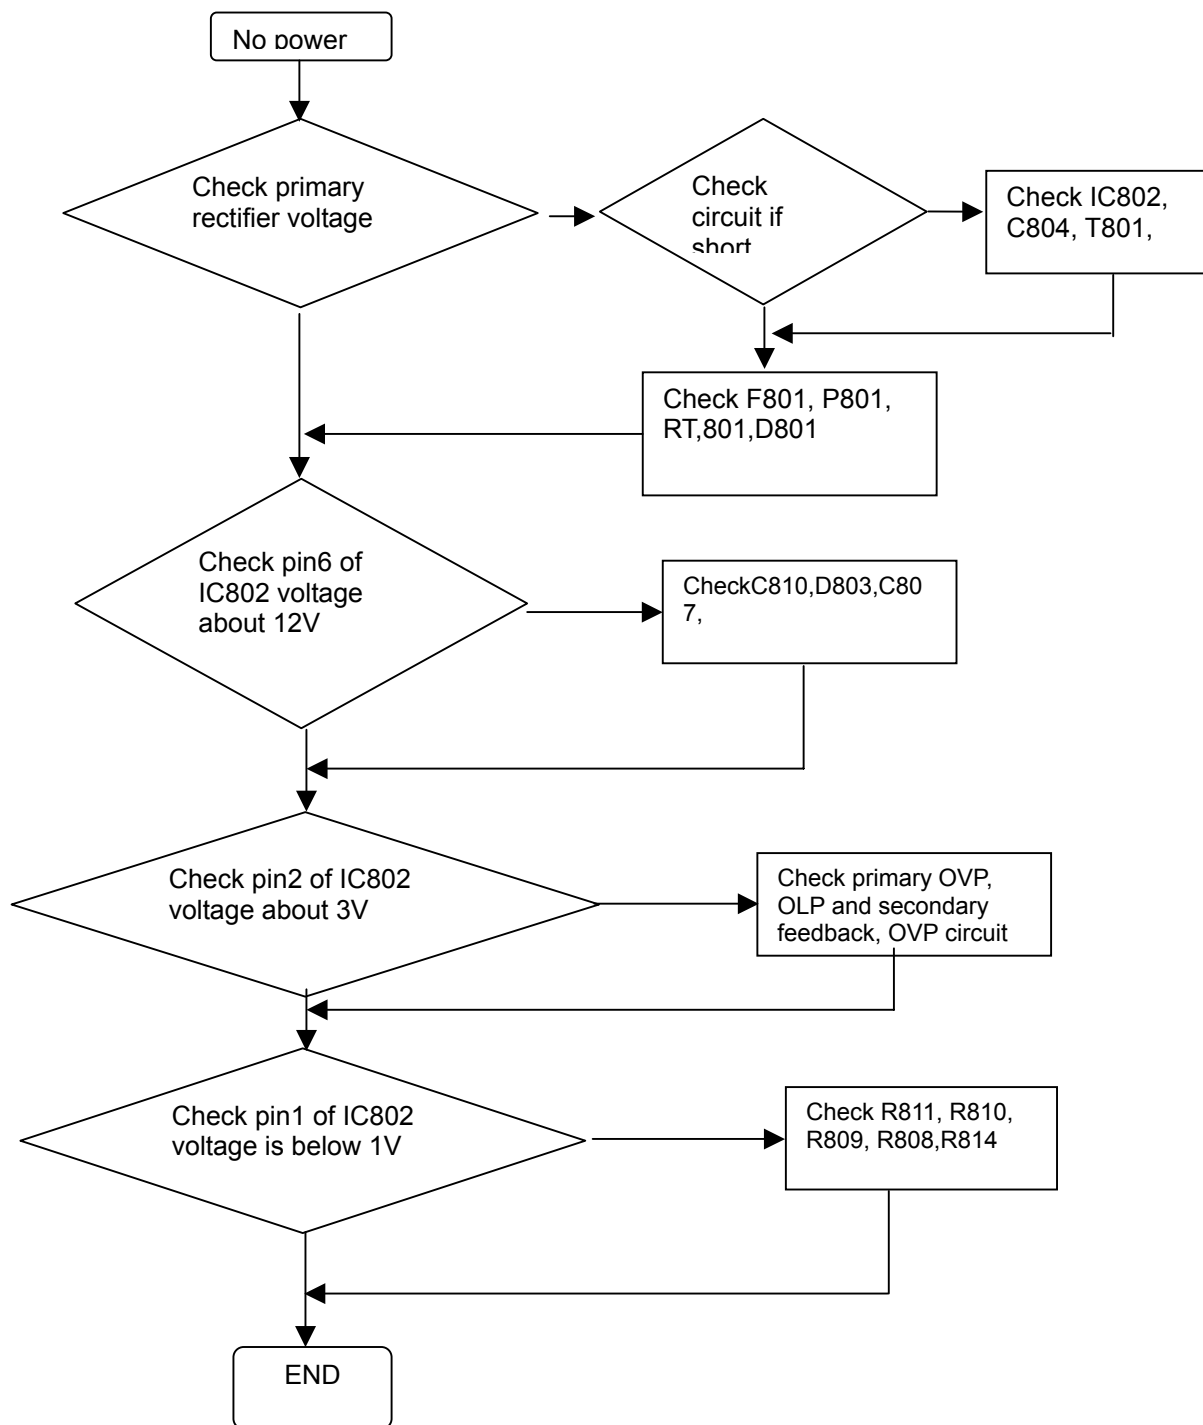

5.4.2 Execute main program for EDID writing (refer to model type), using scanner for barcode

download.

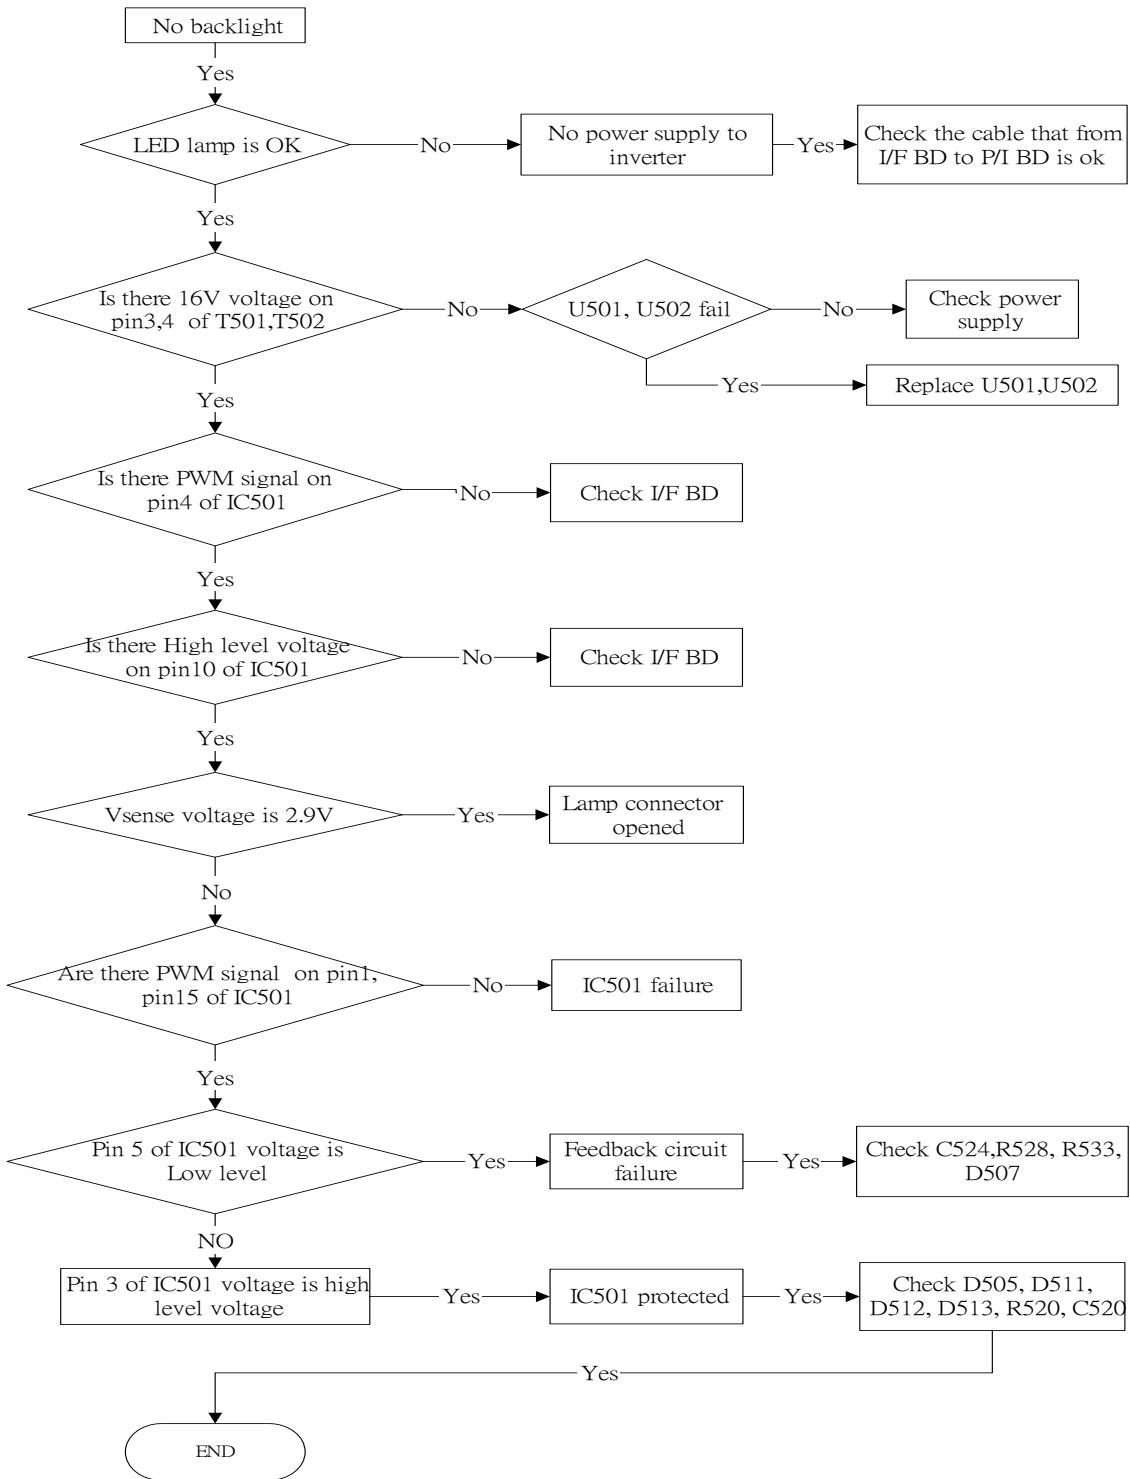

5.4.3 If writing EEPROM is successful, and then shows text "PASS" on screen; if writing EEPROM is failure, then shows text "FAIL".

Chapter 6- TROUBLE SHOOTING

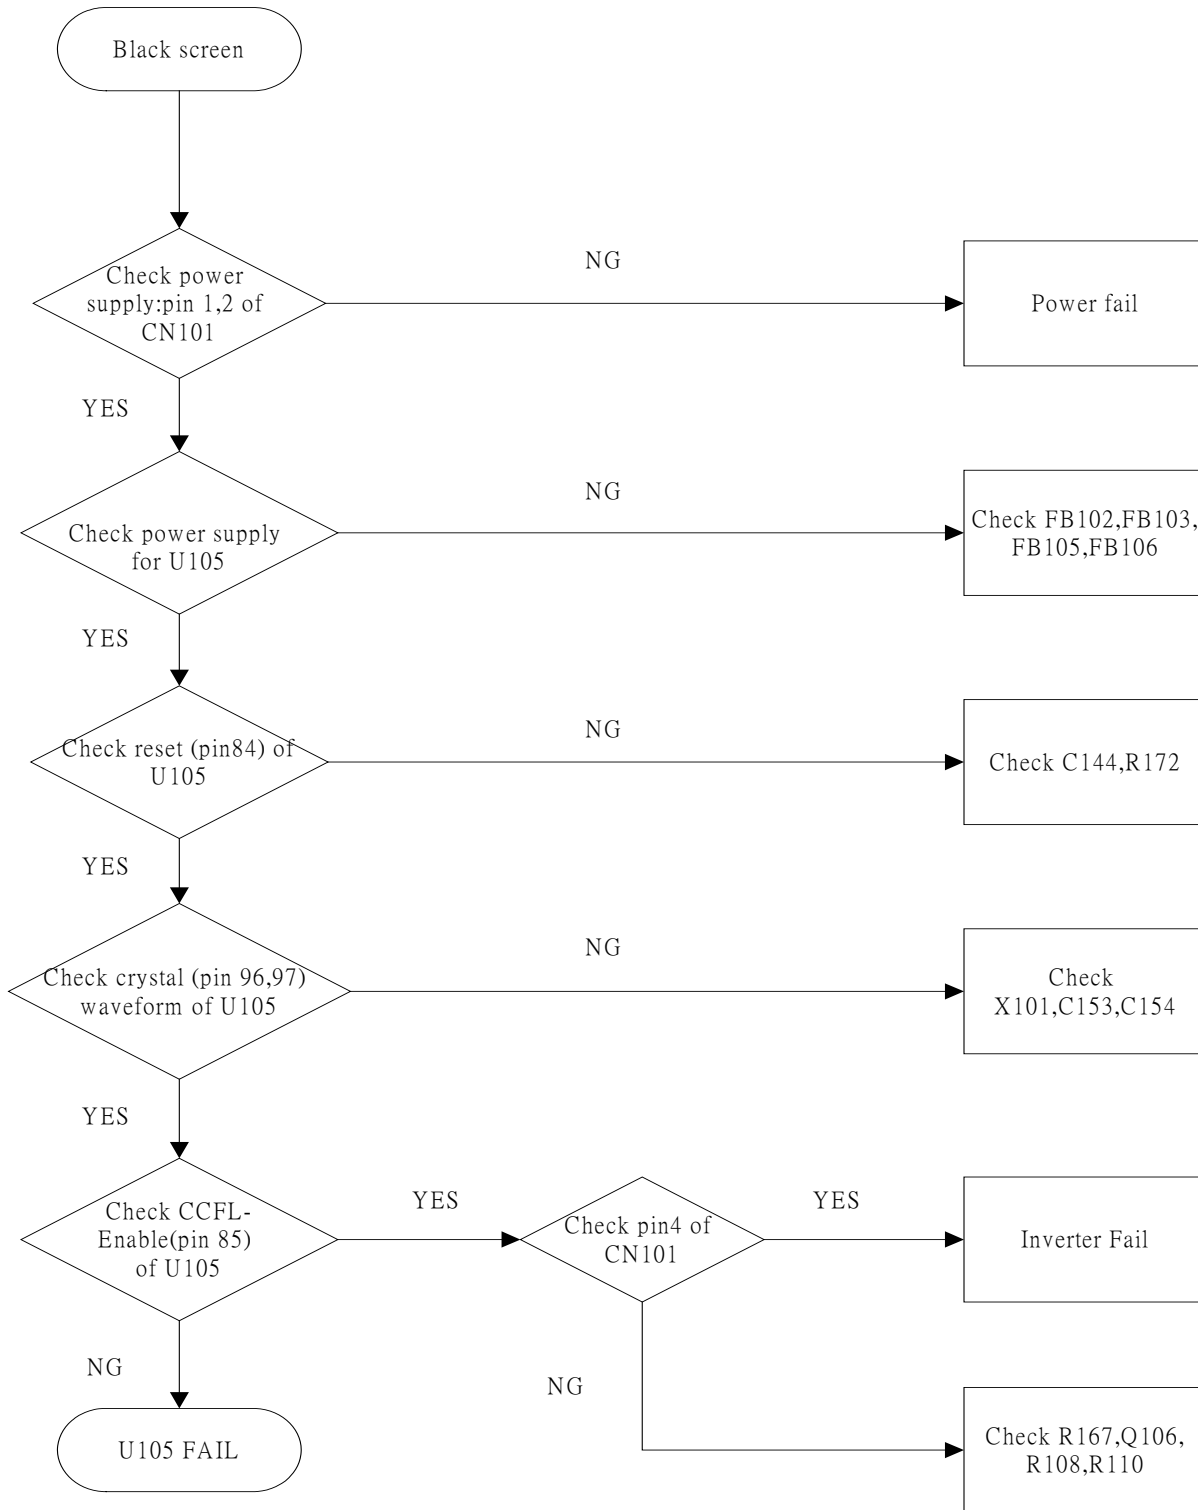

1. No Power & LED Off

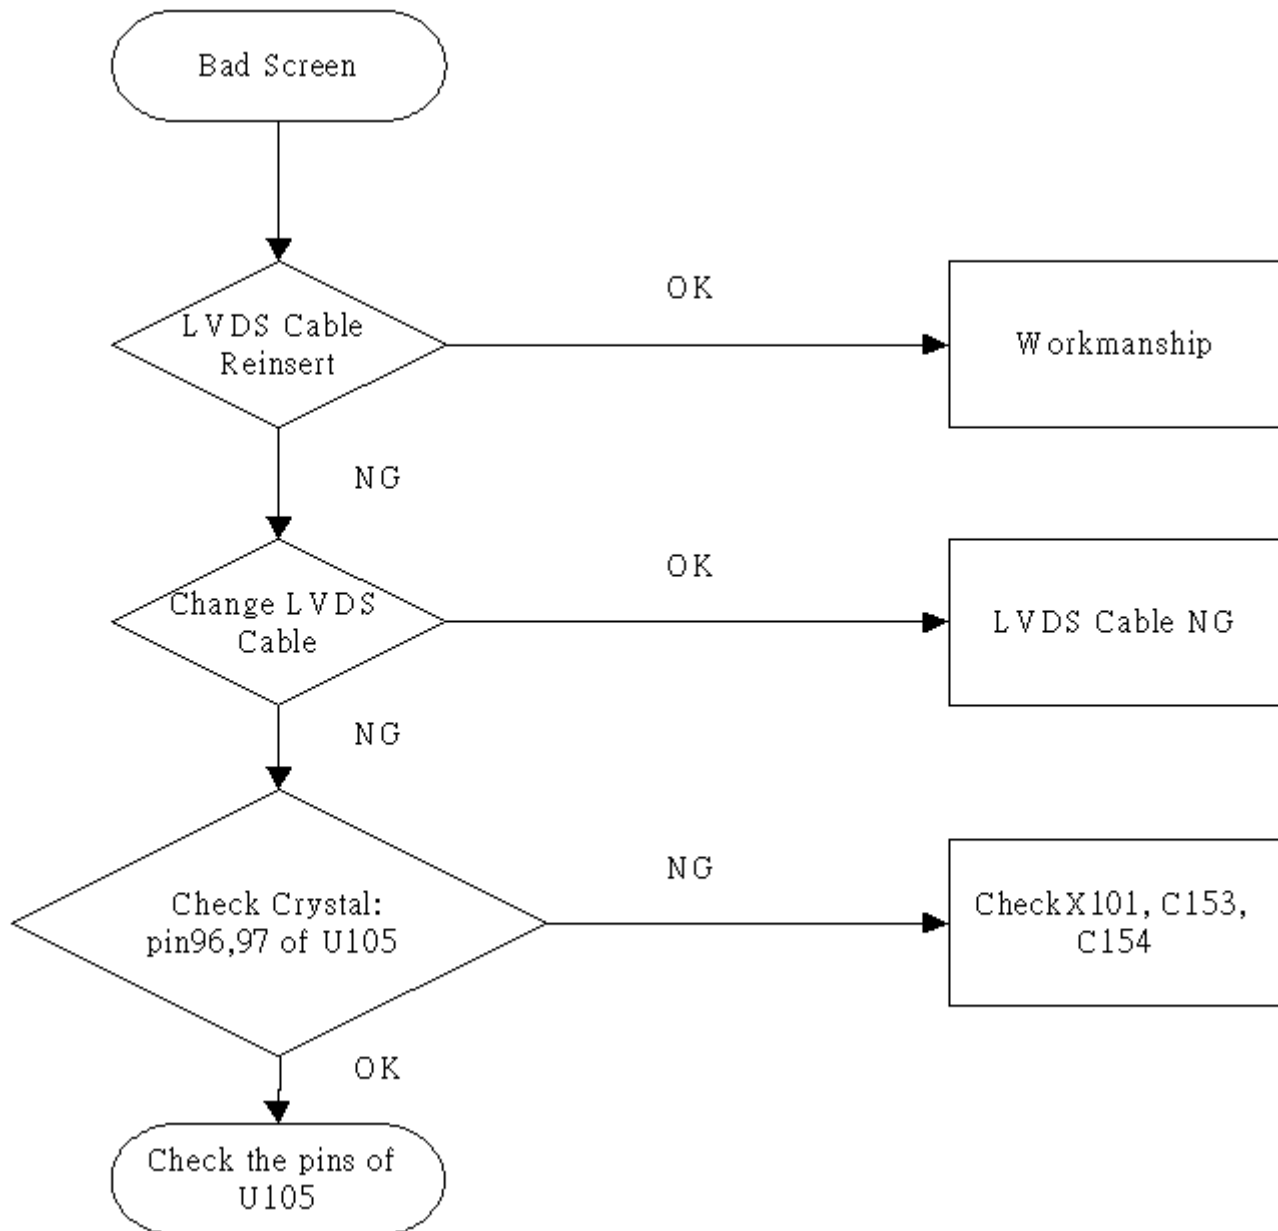

2. No raster

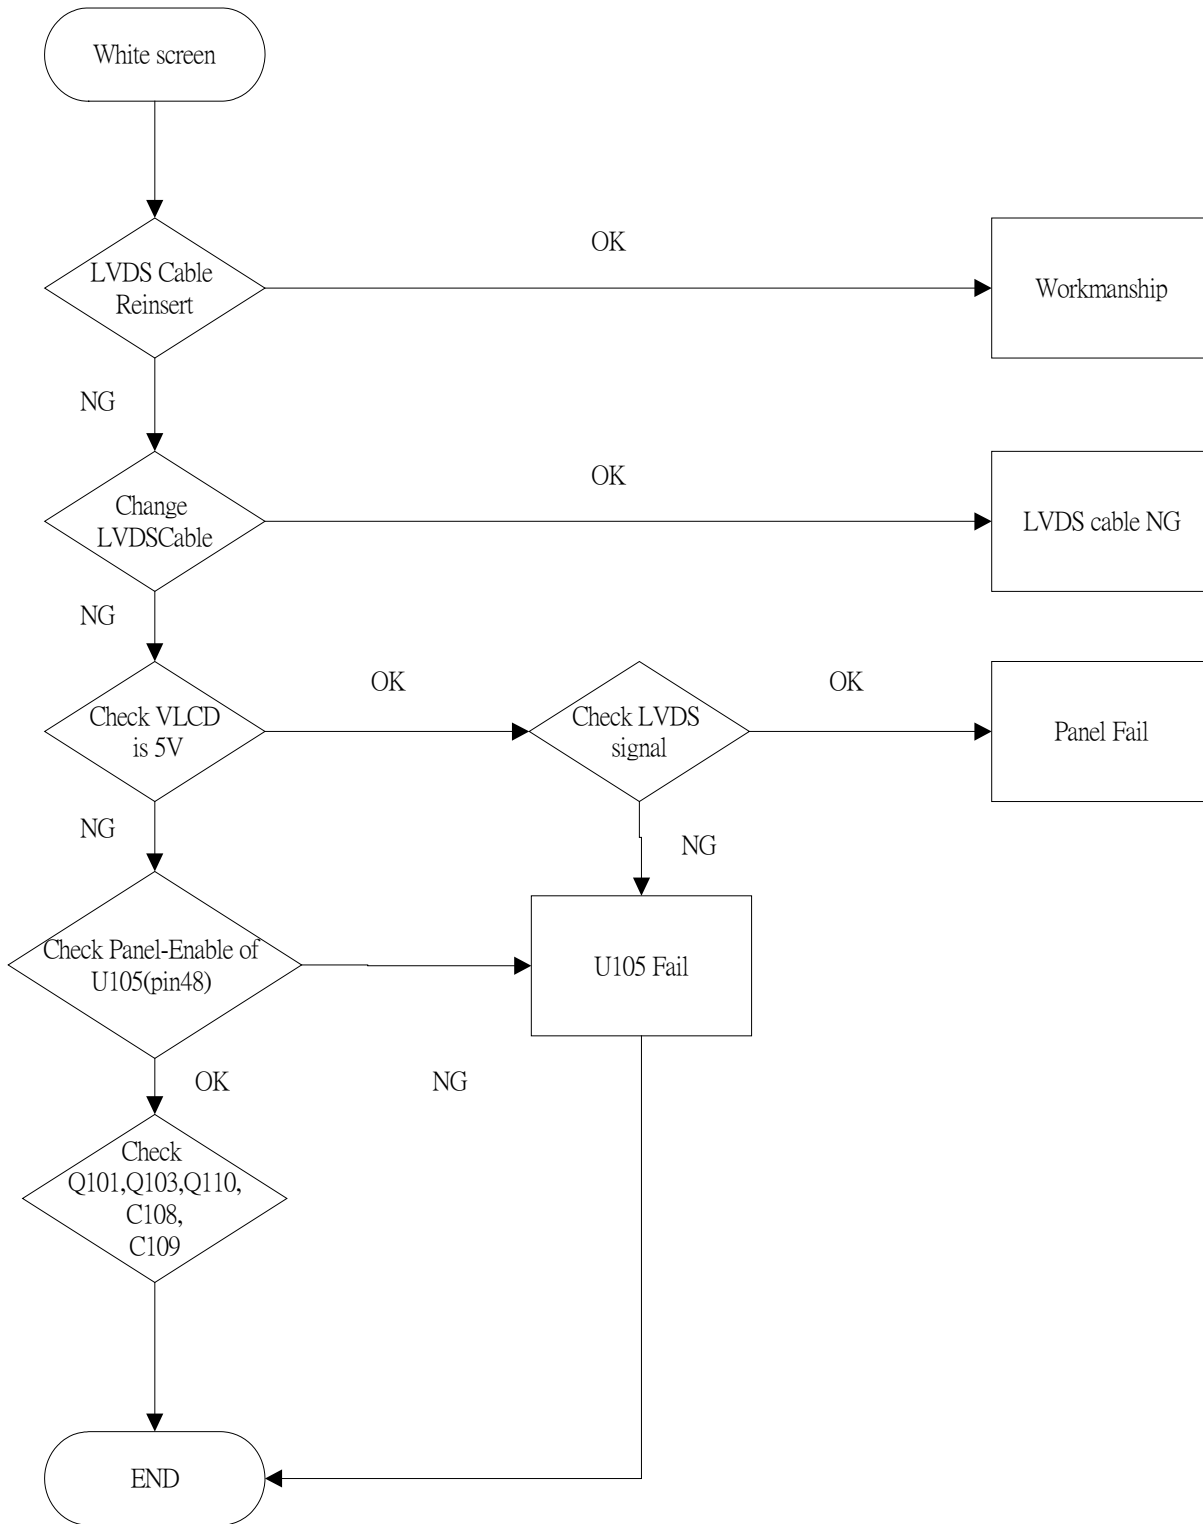

3.Black screen

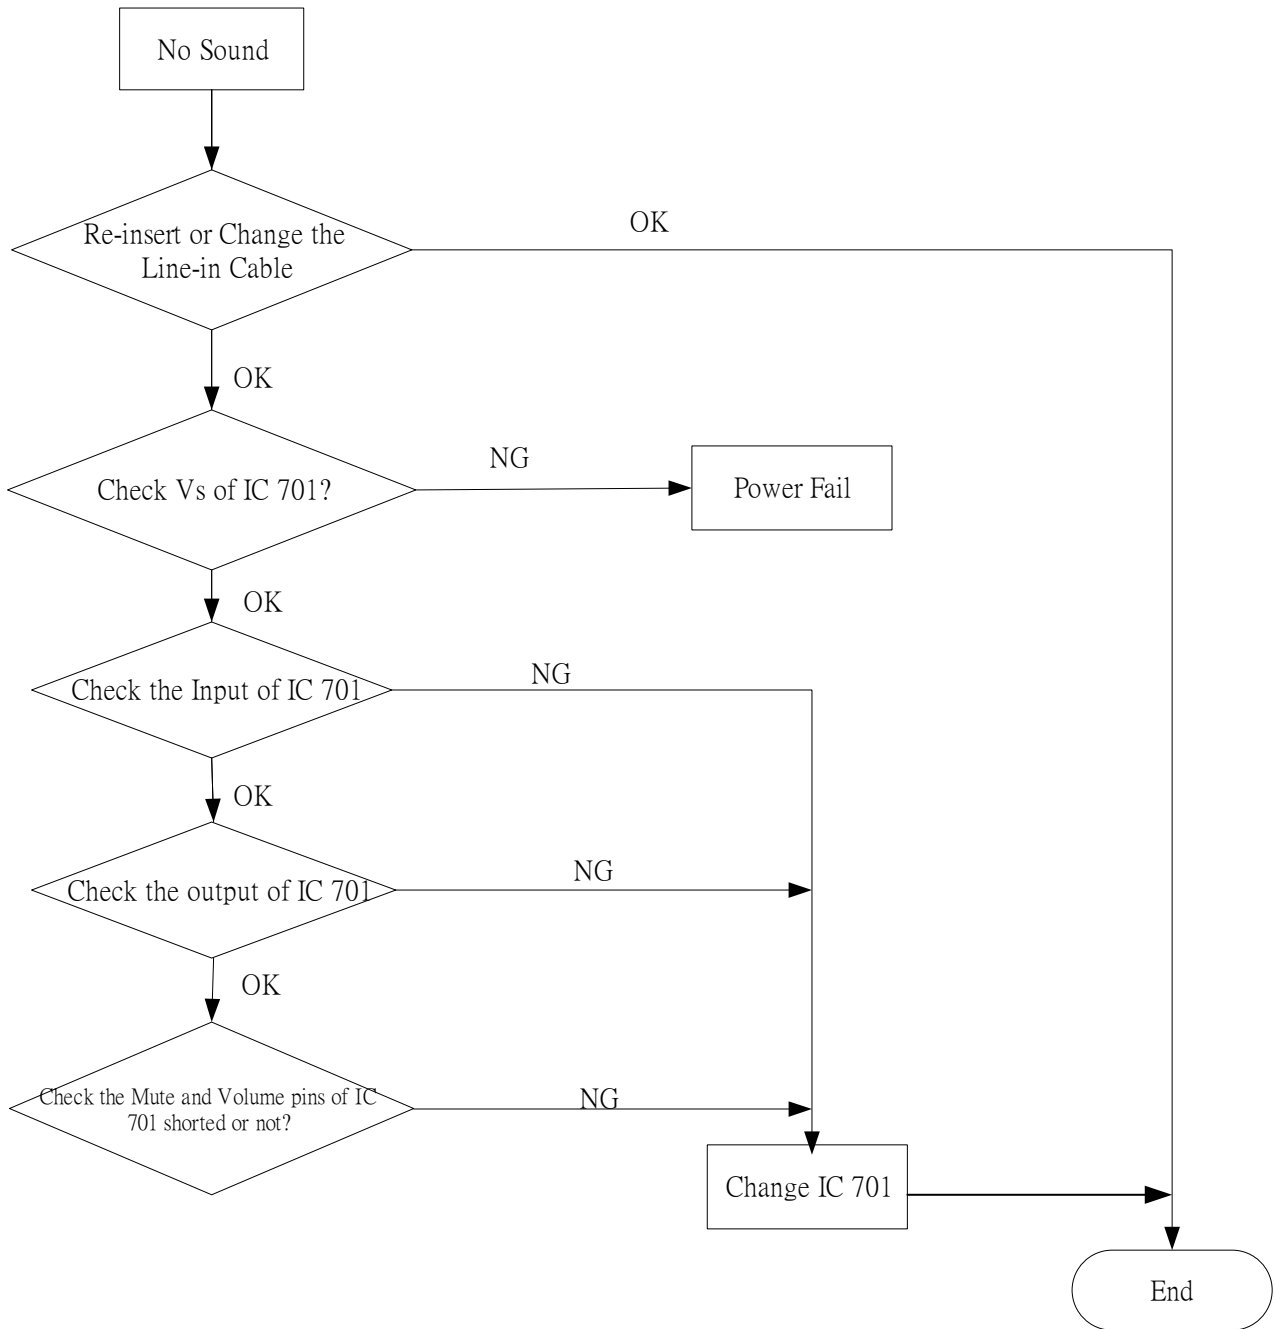

4.Bad Screen

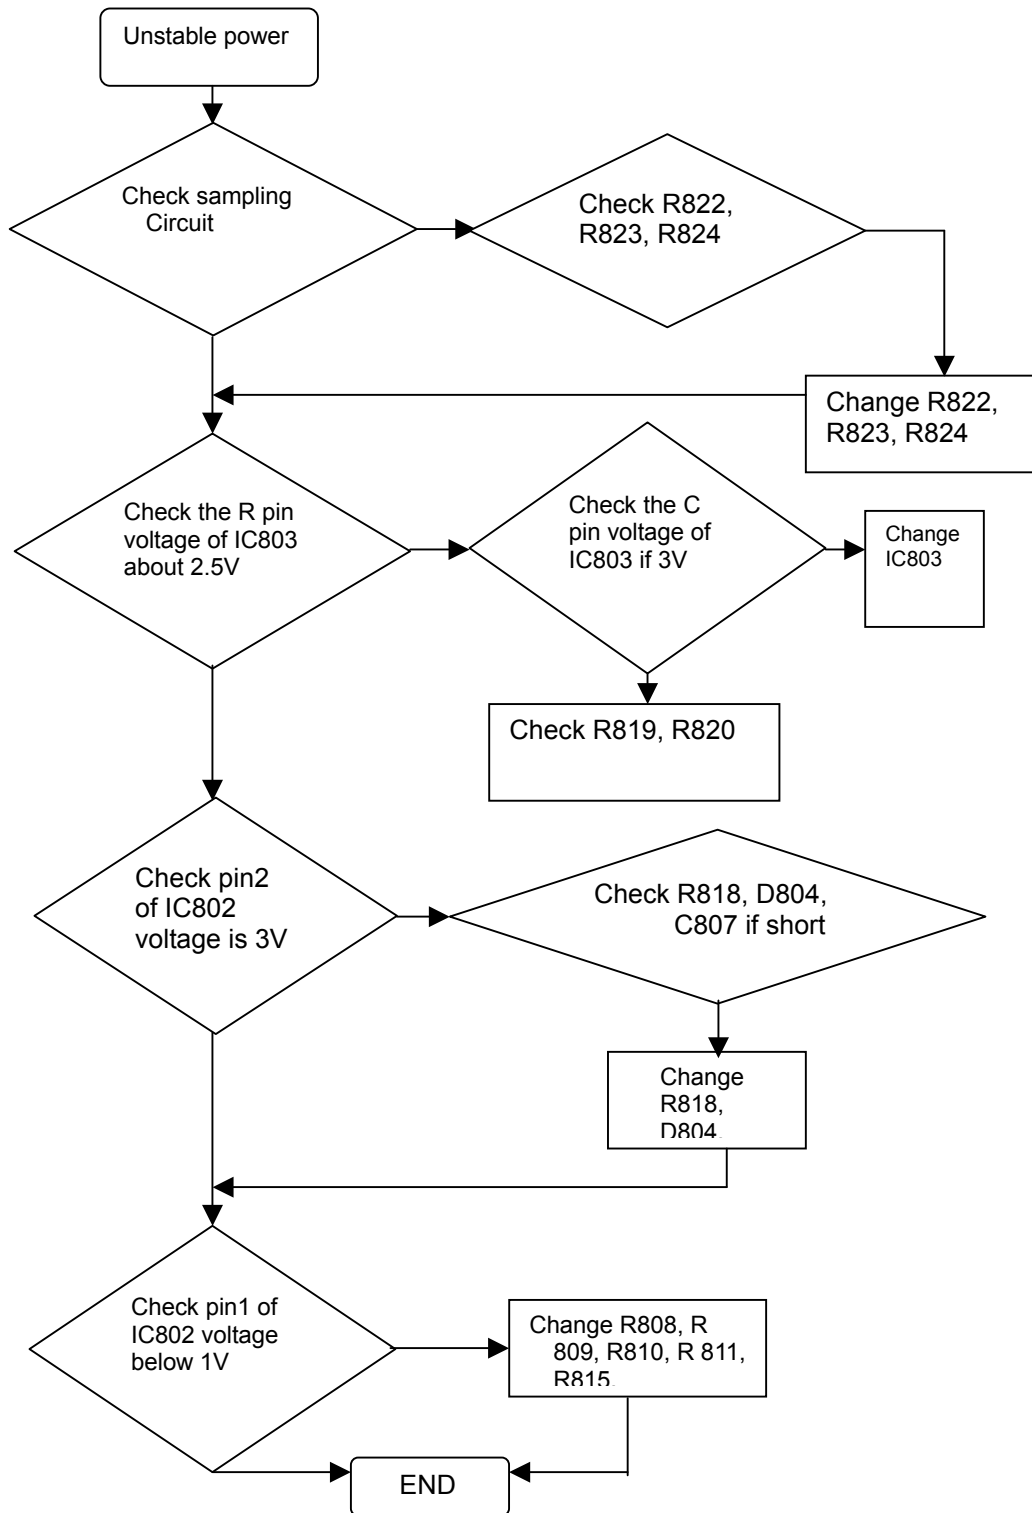

5. White screen

6.No Sound

7. Unstable Power
